CYTEK CONSULTING Division

Cytek Consulting

The Consulting Division designs and specifies engineered automation and industrial IT solutions to meet your business operations criteria and corporate strategic objectives. Our focus is on achieving the right technical fit, irrespective of manufacturer and technology.

GroupCytek

GroupCytek provides platform independent plant to boardroom automation solutions from design through to engineering and commissioning. Our collaborative way of working, innovative approach and technological capability enables us to define and implement the most productive solution for your situation.

Cytek Consulting, Cytek Projects and Cytek Automation work to increase plant productivity, reduce costs and optimise asset performance. Using our technical leadership and engineering capability together with the option of Cytek India, you can access world class skills whilst minimising costs.

A team of project managers, consultants, systems and application engineers totals over 200 staff and associates, supported by a senior management group with more than 150 years industry experience. No automation scope is too small, no automation project too complex.

Our industry expertise includes oil, gas, petrochemical, chemical, pharmaceutical, water, power, industrial manufacturing, integrated infrastructure and logistics sectors.

Adding Value Through Automation

GroupCytek's expertise is focused on optimising the automation asset performance which delivers improved plant performance, product quality and reduced costs for our clients.

We make certain the Automation Enterprise can:

- Ensure data flows to the right desktop
- Achieve optimised plant to boardroom system performance
- Unlock the knowledge in legacy systems
- Seamlessly integrate legacy and new systems
- Facilitate integration of future new applications
- Optimise ERP and supply chain system performance

Delivering Value in Engineering Consulting

Defining and specifying the solution that best fits your operational needs and therefore delivers the best value for your investment is our priority. Our experience and reputation is firmly established in the process and manufacturing environment up to the boardroom and across the supply chain from your suppliers to your customers.

Leadership:

In collaboration with your technical specialists Cytek Consulting defines and specifies the automation and business system solution that aligns with your operational and strategic vision ensuring seamless interoperability and interconnectivity. Operating as an integral part of your company we take responsibility for new automation solutions and also identify the bottlenecks in existing automation systems that are causing operational and productivity issues.

Innovation:

Platform independence and the capability to design, specify and implement based upon global best practice ensures the best fit solutions are recommended as an integral part of a justified business case. Our consultants balance the immediate technical, commercial and financial criteria while factoring in the lifetime cost of ownership, maintainability and operational considerations.

Competence:

Our expertise enables us to specify the optimum solution taking into account a wide range of manufacturers' automation products including:

- Process Management Systems
- SCADA/PLC
- Safety Systems
- Advanced Control and Optimisation
- MES
- Integration to Industrial ERP
- Supply Chain Systems
- Business Management Systems
