CYTEK PROJECTS Division

Cytek Projects

The Projects Division delivers compliant systems engineering and project management across process and manufacturing industry sectors. We work in partnership with you to achieve solutions that are focused on your goals and are in line with internationally recognised ISO and specific industry standards.

GroupCytek

GroupCytek provides platform independent plant to boardroom automation solutions from design through to engineering and commissioning. Our collaborative way of working, innovative approach and technological capability enables us to define and implement the most productive solution for your situation.

Cytek Consulting, Cytek Projects and Cytek Automation work to increase plant productivity, reduce costs and optimise asset performance. Using our technical leadership and engineering capability together with the option of Cytek India, you can access world class skills whilst minimising costs.

A team of project managers, consultants, systems and application engineers totals over 200 staff and associates, supported by a senior management group with more than 150 years industry experience. No automation scope is too small, no automation project too complex.

Our industry expertise includes oil, gas, petrochemical, chemical, pharmaceutical, water, power, industrial manufacturing, integrated infrastructure and logistics sectors.

Adding Value Through Automation

GroupCytek's expertise is focused on optimising the automation asset performance which delivers improved plant performance, product quality and reduced costs for our clients.

We make certain the Automation Enterprise can:

- Ensure data flows to the right desktop
- Achieve optimised plant to boardroom system performance
- Unlock the knowledge in legacy systems
- Seamlessly integrate legacy and new systems
- Facilitate integration of future new applications
- Optimise ERP and supply chain system performance

Delivering Value in Managed Projects

Cytek Projects applies specialist knowledge of automation and provides first class project management and systems engineering skills to help you strengthen your capabilities and drive economic profit. Our professional reputation and credibility is established through our work with end users, engineering procurement contractors, other consulting engineering companies and system integrators in the process and manufacturing industrial environment.

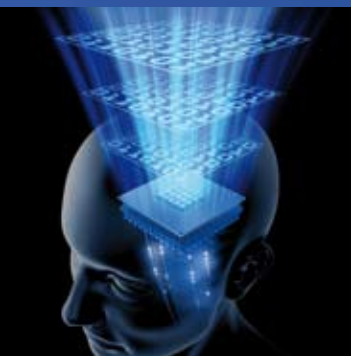

Collaboration:

We implement projects with a continual focus on resources, productivity, budget and quality commitments. Our team operates as an integral part of your company helping you to achieve your goals while professionally representing your company. Working to agreed target cost solutions, our project teams and responsibilities can include project managers, client engineers and main automation contractors as well as our specialist systems, applications and other technical resources.

Delivery:

The combination of platform independence with global best practice ensures the best fit solution. Every project is delivered to the contractually agreed engineering standard. Our team is committed to ensure a new or installed automation system is performing to the optimum level and your investment delivers the highest possible returns.

Expertise:

We have proven expertise across many manufacturers' automation solutions and technologies including:

- DCS
- SCADA/PLC
- Safety Systems
- Human Machine Interfaces
- Advanced Control and Optimisation
- MES
- Networks
- Integration to Industrial ERP
